

## **thyssenkrupp Schulte invests in new high-rack storage system**

thyssenkrupp Schulte has invested in a new high-rack storage system at its Radebeul site. Since commissioning in February 2022, the new system has increased process efficiency in operations and paved the way for automated materials warehousing. In the future this will allow the loading sequence and warehouse handling to be optimized with the help of a system.

### **Efficient use of space creates growth opportunities**

With dimensions of 21 meters high, 17 meters wide and 59 meters long, the high-rack offers many advantages for the eastern district of the materials trading experts. The efficient use of space creates additional storage capacity. In total, over 6,000 tons of long material can be stored in the 2,020 cassettes of the high-rack. This offers further growth potential: "The new high-rack storage system will enable us to further expand our business and optimally meet increasing customer requirements in the future," says Tobias Huppenthal Sales Manager in the Eastern District.

### **Contribution to CO<sub>2</sub>-reduction**

The high-rack storage system supports the company-wide goal of CO<sub>2</sub>-savings in many aspects. Energy is recovered via dynamic energy storage systems during automated processes. The increased storage capacity for materials will also significantly reduce transports from other warehouses in the future, which will reduce CO<sub>2</sub>-emissions. These and other companywide measures are small but important steps towards achieving the goal of climate neutrality at thyssenkrupp Schulte by 2030.

### **About thyssenkrupp Materials Services**

thyssenkrupp Materials Services is the biggest mill-independent materials distributor and service provider in the Western world with around 380 locations – including around 260 warehouse sites – in more than 30 countries. The versatile range of services offered by the materials experts allows customers to focus even more strongly on their individual core businesses. As part of its strategic further development "Materials as a Service" the company is focusing on the supply of raw materials and materials as well as products and services in the area of supply chain management. Digital solutions ensure efficient and resource-saving processes for customers and thus provide the basis for sustainable action. From 2030 Materials Services will operate on a climate-neutral basis.
