

Press release

tk accelis at Aluminium 2026 in Dusseldorf: Materials, prefabrication and logistics for resilient supply chains

- Business units Processing and Materials present their products and solutions in hall 3, stand E37
- tk accelis Materials focuses on lead-free aluminum, custom profiles and paperless sheet products
- tk accelis Processing presents prefabrication solutions for materials as well as supply concepts

For the first time under its new brand name, tk accelis is attending Aluminium 2026 in Dusseldorf. The trade fair is taking place at Dusseldorf's exhibition center from October 6 to October 8. As an expert for material supply and processing as well as supply chain management, tk accelis is participating with the business units Processing and Materials.

tk accelis Materials focuses on aluminum sheets, rods and customer-specific aluminum profiles. Particularly lead-free aluminum alloys are being presented, which offer an effective alternative to materials containing lead. By forgoing lead, environmental contamination and potential health risks can be mitigated along the entire value chain. At the same time, the necessary specifications for industrial application nearly match the level of comparable materials containing lead. Moreover, the material is easier to recycle.

Custom aluminum profiles allow for nearly every open or closed cross-sectional geometry. tk accelis Materials takes on the entire process from the selection of suitable producers and the technical coordination to the delivery or storage of the material. tk accelis Materials also presents paperless aluminum sheets. These are particularly relevant for companies with a high degree of automation and processes to ensure the surface protection of paperless sheets. Without separator layers, there is a lower risk of disruptions in the material flow and disposal efforts are mitigated. In short: lower process complexity leading to an increase in process security.

tk accelis Processing exhibits its offering of aluminum sheet processing, such as custom cutting, and the manifold application possibilities of the raw material. Apart from processing and prefabrication solutions, resilient supply chains are also on the agenda: Individual supply concepts through a diversified supply chain management (multi-sourcing) constitute an important tool for customers. Moreover, the team is presenting the advantages of a multi-metal service center. The service center in Mannheim is able to process steel and stainless steel in addition to aluminum and in doing so offers the processing of several metals at a single site. Embedded in a strong European network, tk accelis Processing provides custom multi-metal solutions.

About us

tk accelis is a global leader in materials distribution and services across the entire supply chain. tk accelis combines three fields of activity in a seamless offering: materials distribution & trading, customized processing, and supply chain management. With a growing range of data-driven services, tk accelis is consistently driving the digitalization of supply chains. The company calls this integrated approach "Materials as a Service." Around 15,500 employees serve more than 250,000 customers from around 400 locations in the core markets of Europe and North America. In fiscal year 2024/25 and according to thyssenkrupp AG's segment reporting, tk accelis generated total sales of €11.4 billion.
